

To whom it may concern
Diegem, September 3, 2024

Dear Dr/Sir/Madam,

We would like to inform you about the latest developments regarding the expected deliveries of Beyfortus in Belgium. Recently, we were notified of a delay in the packaging process of the Beyfortus doses, making the initial schedules no longer feasible.

This change particularly affects the delivery of the 100 mg Beyfortus presentation, intended for young children weighing more than 5 kg. We expect these doses to arrive in our storage facility during the week of **September 30 to October 4**. This means that the start date of the immunization campaign for children weighing more than 5 kg needs to be revised. Worst case the doses will arrive on the 4th. We are organizing now to ensure the doses can leave right after arrival to the hospitals and warehouses. I will keep you informed of any news.

The 50 mg Beyfortus doses, intended for the most vulnerable children weighing less than 5 kg, will be delivered in our storage facility during the week of **September 23 to September 27**. We expect to deliver these doses to all hospitals by September 30 at the very latest.

We are aware that this adjustment has a significant impact on the immunization campaign organized by your team and in your hospital and we sincerely apologize for the consequences involved.

Based on the new delivery dates and the information you provided regarding the number of births and required doses, we will make a proposal for the quantities to be ordered for the start of the immunization campaign (2-3 weeks) by the end of next week.

We thank you for your understanding and are ready for any further questions or clarifications.

Kind regards.
